# Setup for Dokuwiki:

## Sidebar with tree:

1. Add the plugin (administration -> plugins management -> search and install) Indexmenu Plugin (of Samuele Tognini).
2. create a page named "sidebar". This will activate the sidebar that is already present by default.
3. In this page "sidebar", enter `{{indexmenu>accueil_welcome#1|js navbar }}` as content (adapt the name of your folder!).

## Increase the brightness of the side:

Go to administration -> parameters of template -> brightness of the page (130em) and brightness of the sidebar (25).

## Enable pages names with capital letters

In a console of the Nethserver: edit `/usr/share/dokuwiki/inc/pageutils.php` and comment out the line `$id=utf8_strtolower($id);` with `/*` and `*/`

```
# cd /usr/share/dokuwiki/inc/  
# cp pageutils.php pageutils.php.orig  
# nano pageutils.php
```

## Enable the "spaces" in the pages names

In a console of the Nethserver: edit `/usr/share/dokuwiki/lib/plugins/config/settings/extra.class.php` and add a "space" (=blank) between the "." and the "'" in `$str = '_. '`; in the function `__construct($key, $param=null)` (a few lines after "Class setting\_sepchar"):

```
# cd /usr/share/dokuwiki/lib/plugins/config/settings/  
# cp extra.class.php extra.class.php.orig  
# nano extra.class.php  
--> $str = '_. ';
```

In Dokuwiki, login as admin and go to "administration" -> "parameters" and search for "sepchar".

Then choose the space (" ") instead of the " \_".

## Backup

Don't forget to backup `/etc/dokuwiki`, `/var/lib/dokuwiki`,  
`/usr/share/dokuwiki/inc/pageutils.php` and  
`/usr/share/dokuwiki/lib/plugins/config/settings/extra.class.php`

After the restore of a backup, all pages with a name that includes blanks or capital letters will be ignored if the both last files aren't restored too!

## Update

After an update of dokuwiki by updating the module(nethserver-dokuwiki), the above described settings about the "spaces" and the capital letters into the page names must be redone (because updating the rpm over-write the files).

The plugin for the index menu (see 1.) must be re-installed.

Before updating the rpm nethserver-docuwiki, make sure that this described settings works with the new version of the rpm!

Otherwise you will get a dokuwiki without the menu and without the pages with names including capital letters and "spaces"!!
