

## Small tricks for Ubuntu

# Add a network interface (Ubuntu22)

- list the interfaces

```
# ip
```

# Auto-connect VPN and Wifi

runs on Ubuntu18 LXDE

- ```
# nano /etc/lightdm/lightdm.conf.d/restart-NM.sh /// and enter in it:  
#!/bin/bash  
  
# wait 20 secondes  
sleep 20s  
  
#restart NetworkManager  
service network-manager restart  
  
exit 0
```

- ```
# chmod +x /etc/lightdm/lightdm.conf.d/restart-NM.sh
```

- ```
# nano /etc/lightdm/lightdm.conf.d/10-restart-NM.conf /// and enter in it:  
[SeatDefaults]  
session-setup-script=/etc/lightdm/lightdm.conf.d/restart-NM.sh
```

# Change the keyboard layout into the login manager

works for Lubuntu20:

```
sudo dpkg-reconfigure keyboard-configuration
```

and maek your choise.

## Disable the touchpad of laptops

Source: <https://askubuntu.com/questions/819789/permanently-disable-touchpad-lubuntu-16-04>

For “Lubuntu” (LXDE): *Preferences>Default applications for LXSession>AutoStart> then “Add”*  
*synclient TouchpadOff=1*

## Documents management

<https://gitlab.gnome.org/World/OpenPaperwork/paperwork/blob/master/flatpak/README.markdown#readme>

## Position of the icons on the desktop not stored

If one day all your icons are always on the left side of the desktop and their position is not remembered between the sessions: check the permissions and make a correct setting:

```
$ find . '!' -user $USER           and look if "./.local/share/gvfs-metadata/home" is present into the list of files not owned by you  
$ ls -al ./local/share/gvfs-metadata/home   will show who is the owner (generally this is "root")  
$ sudo chown -R your_user_name:the_group .local/share/gvfs-metadata/home
```

Logout and re-login: the problem should be gone.

## Remote Desktop

### Via RDP

Install and run the script given here: <http://c-nergy.be/blog/?p=11868>  
See <https://help.ubuntu.com/community/xrdp> too.

## Run a script at startup

<https://linuxconfig.org/how-to-run-script-on-startup-on-ubuntu-20-04-focal-fossa-server-desktop>

```
$ sudo cat /usr/local/bin/wol-omv.sh
#!/bin/bash

/usr/sbin/etherwake -i enp3s0 00:11:22:33:44:55

$ sudo cat /etc/systemd/system/wol-omv.service
[Unit]
After=network-online.target
Wants=network-online.target

[Service]
ExecStart=/usr/local/bin/wol-omv.sh

[Install]
WantedBy=default.target

# chmod 744 /usr/local/bin/wol-omv.sh
# chmod 664 /etc/systemd/system/wol-omv.service

sudo systemctl daemon-reload
# systemctl enable wol-omv.service
```

## Terminal

<https://serverfault.com/questions/267099/terminal-only-shows>

## Webcam

Settings of webcam:

### v4l-utils

- \$ sudo apt-get install v4l-utils

- \$ v4l2-ctl -l

to list the possible settings

- \$ v4l2-ctl -c focus\_auto=0

to disable the autofocus

```
• $ v4l2-ctl -c focus_absolute=100
```

to set the focus at value “100”

## GTK+ UVC Viewer (UNOFFICIAL)

installed via the software manager (look for “guvcview”)
